

Researches Relevant to Theosophy

Vol. II N° 3

A quarterly publication devoted to the collection of researches in the sciences and humanities that are relevant to theosophical studies.

Editorial

Welcome to the third issue of 2019 *Researches Relevant to Theosophy*.

This quarter brings articles and research papers on various academic disciplines which offer opportunities to reflect on the Ancient Wisdom. There is a definitive trend for the scientific communities to open new (old) doors and put more effort to study and experiment on non-classical disciplines - parapsychology, ESP,...

In this issue, you will discover clairvoyant experiments related to the Occult Chemistry, studies on the relationships between mind and body, ... all of them relevant to theosophy, plus other findings and discoveries from the Science Community.

It is hoped that more people will be involved in the gathering of research information. We appreciate your feedback. You may email us at editor@theoscience.org or comment on the website of *Researches Relevant to Theosophy* (theoscience.org).

Clairvoyant Observations on Atoms - The Occult Chemistry and Modern Science

Jainism defines clairvoyance as one of the five types of knowledge and it classifies it as direct knowledge. Ancient Jain Scriptures indicate that attempts were made to estimate the size of the smallest particles of matter through power of clairvoyance. The smallest particle was measured and its measurement is consistent with current scientific knowledge.

Recently, a new model has been developed by scientists, integrating matter, mind, space and time. More dimensions were added, including three dimensions for consciousness. The outcomes of this model is in good quantitative agreement with the number of "anu" seen by Annie Besant and co-workers some one hundred twenty years ago.

Ideas About Legalizing Nature's Rights

A group of scientists is currently discussing the possibilities to define and legalize rights for Nature, in order to counteract the destruction of the natural world. The "Rights-of-Nature" movement is seeking to promote the rights of non-human life. Some countries, like Ecuador and Bolivia, have already started this process. The aim is to render illegitimate the most destructive activities.

Environmental heavy destruction may not be new. In May 1891, Madame Blavatsky wrote in her magazine, *Lucifer* Vol. VIII, N° 45 : "Owing to the triumphant march and the invasion of civilization, Nature, as well as man and ethics, is sacrificed, and is fast becoming artificial. Climate is changing, and the face of the whole world will soon be altered. Under the murderous hand of the pioneers of civilization, the destruction of whole primeval forests is leading to the drying up of rivers. . . The pure air of the country is polluted with smoke, the smells of greasy railway-engines, and the sickening odors of gin, whiskey and beer."

Honesty - An Existing Value of Humanhood

Trading between honesty and self-interest is a good indicator of the state of maturity of our societies. A recent study using field experiment in 40 countries shows how honest behavior can be affected by a number of societal factors.

Universe Expansion Rate Measurements Discrepancy

Measurements of the universe expansion rate are giving conflicting results. Since the discovery of the expansion of the universe (Edwin Hubble – 1920's), the measure of the expansion rate has been improved to a good level of accuracy . . . until a new evaluation method delivered a value with a significant departure from the estimated one. This could invalidate the current standard theory of cosmology (Lambda-CDM), which includes dark matter and dark energy.

Religion & Morality

A new study published in *Current Biology* reveals that religious belief has a negative influence on children's altruism and judgments of other's actions. The survey covers some of the monotheistic religions only (Christian's and Muslim's). This study report was later on retracted from publication, but can still be accessed [here](#).

Madame Blavastky wrote an article in The Theosophist, Vol. V, N° 2 (1883) about morality and religion : "Exoteric religions base their morality on the hope of reward and fear of punishment at the hands of an Omnipotent Ruler of the Universe by following the rules he has at his pleasure laid down for the obedience of his helpless subjects; in some cases, however, religions of later growth have made morality to depend on the sentiment of gratitude to that Ruler for benefits received. The worthlessness, not to speak of the mischievousness, of such systems of morality, is almost self-evident."

Mindset Inducing Changes in the Biology of the Body

Stress-related diseases like major depression is causing visible alterations on the individual's genome. A recent study demonstrated that stress and adversity can cause mtDNA amount and telomeric length reversible changes. One possible hypothesis linking stress/adversity to molecular changes could be through the hypothalamic pituitary axis.

Madame Blavastky explained to her students that : "The fourth cavity of the brain is the Pituitary Body, which corresponds with Manas-Antaskarana, the bridge to the Higher Intelligence; it contains various essences. The pituitary Body is the organ per se of the psychic plane." (Collected Writings, Vol. XII, p. 697)

When Taoist Cosmology Meets Modern Physics

One of the latest theory on Gravitation (Quantum Gravity) is displaying a deep connection with Taoist Cosmology. A paper published by Steven M. Rosen proposes a comparison between some of the key concepts of both theories. Emphasis is put on similarities between Symmetry Breaking in Modern Physics (Strings Theory) and the Yin-Yang mechanism in Taoism. The proposed model includes the evolution of elementary particles through cycles of expansion and contraction of a spiraling universe.

A New Cyclic Model for the Cosmology of the Universe

A new theory of cosmology of the universe was published, which main feature is the cyclic aspect – expansion-contraction. Compared to previous identical theories, the characteristics of this new one matches with current observations. The cyclic evolution is dominantly classical; it does not require quantum domination period, therefore eliminating the multiverse hypothesis, well-known for its impossibility to be demonstrated (10^{500} possible universes...). At the end of the contraction phase, dimensions never cross the Planck scale limits, therefore eliminating also the singularity of the current General relativity model.

VENUS, An Habitable World Long Time Ago ?

A climate simulation to determine the temperature at the surface of Venus during its early life was done, using data from a space probe (Magellan), orbital parameters and hypothesis like atmospheric composition, solar spectral irradiance, ocean volume,... It concludes that Venus could have had moderate/habitable surface temperatures – an average of 11°C to 56°C – during its early life, up to 715 million years after its formation.
