Editorial

Welcome to this issue of Researches Relevant to Theosophy.

A new human-made dragon is born. It was baptized as Artificial Intelligence (AI). It looks like a new technological revolution, and it may be so, due to its forecasted impact on human societies.

But... AI is all but intelligence as we understand it in Theosophia. It is a steroid mental capability using man-made data. It can and will be useful when manipulating large data, which human cannot do as efficiently. It will impact our human society, for good and no good.

Now, when it comes to spirituality, AI is not the proper channel or magic tool, it can even be a misleading path, because it has NO DISCERNMENT. It is missing the basic universal values which support the manifestation of Life.

The Wisdom Religion has no "source code", and it can only be understood (sensed, lived) through the channel of the heart (intuition).

Contributions to this publication are welcome. Email to the editors the title, date, source and summary of the research report, together with the full citation of the source or sources, whether website, book or article.

THE VIEW

Nowadays science is an industry, practised factory-fashion, with huge empires, awards and egos at stake, and dependent on vastly expensive machinery. No young scientist now dares step out of line if he or she wants a career, and the more established ones have everything to lose by doing so. As a result, true science is practised less and less. It takes huge moral commitment and courage to think less narrowly; yet without thinking differently no great discoveries are made. Most of the great discoveries of science of the past were made by independent individuals working with only basic equipment and often alone (many were clergy).

They were true scientists, because they asked the important big questions and kept their minds open. This is harder nowadays. And broadcasters and journalists are afraid of appearing foolish by giving any credence to anything other than scientism, since that is what the establishment enforces (they are also now locked into huge, inflexible bureaucratic systems of their own). Meanwhile the humanities have lost their nerves, for a host of reasons, and just want to ape what they see as 'science', though what they ape is, in fact, scientism: the belief that all human questions can be answered by the application of a framework of reductive materialism.

The Universe is not a Simulation

A mathematical Proof

The idea that our universe might be nothing more than an elaborate computer simulation has been a favorite theme in science fiction for decades. A new research from The University of British Columbia demonstrates that it is mathematically impossible. It also demonstrates that the cosmos itself is built upon a kind of understanding that lies outside the reach of any algorithm. Physicists describe this informational layer as a "Platonic realm" from which space and time themselves emerge.

"No more than Science, does esoteric philosophy admit *design* or "special creation". It rejects every claim to the "miraculous," and accepts nothing outside the uniform and immutable laws of Nature. But it teaches a cyclic law, a double stream of force (or spirit) and of matter, which, starting from a *neutral centre of Being*, develops in its cyclic progress and incessant transformation."

The Secret Doctrine, Vol. II, p. 731 (B. de Zirkoff edition)

Oldest Maya Monument could be a Map of the Universe

New fieldwork revealed that a monumental complex built by the Maya around 3,000 years ago was modeled on a map of the cosmos, a cosmogram. It has a shape of a cross measuring 9 and 7.5 kilometers. A team of archeologists of the University of Arizona has conducted aerial exploration, fieldwork and excavations in the Aguada Fénix area, revealing one of the earliest example of Mesoamerican directional symbolism. The team concluded that "The rulers and elites of Classic period Maya centers acted as holders of calendrial and other esoteric knowledge and were viewed as the embodiement of universal orders."

Extra-Terrestrial Life's Ingredients in Meteorites

Findings on the Murchinson meteorite, which crashed into Australia in 1969, revealed some of the life's ingredients - the nucleobases (adenine, guanine, thymine, cytosin, and uracil) were present in this ancient stone. Interesting enough is the fact that this meteorite is older than the solar system (7.5 billion years) ! Two other meteorites (Orgueil - France, 1864, and the Allan Hills' Martian meteorite) revealed similar components. General studies on those three meteorites have revealed thought-provoking facts about life in other parts of the universe.

Space probes discovered liquid water stream and frozen ice on Mars, glaciers on Saturn' moon Enceladus. Radio telescopes have detected more than 100 organic molecules in interstellar dust clouds.

All these findings can now being correlated, thanks to the latest developments of Artificial Intelligence (AI) where it will be possible to put all the pieces of the puzzle together. These are the domains where AI can serve as a tool to enhance analytical activities and support human intelligence in the search for extra-terrestrial life.

Dark Matter & Dark Energy : Are they Real ?

A new theory claims dark matter and dark energy don't exist...

The latest cosmogonic models describe the distribution of the universe's mass-energy in terms of three components: dark energy (70%), responsible for the accelerated expansion of the universe; dark matter (25.5%), which accounts for the anomalous motion of stars and galaxies; and the visible matter (4.5%—of which 0.4% corresponds to visible stars, with the remaining consisting of cosmic dust). Dark matter and dark energy have not yet being observed.

The new research challenges that hypothesis, attributing the effects to the natural weakening of the fundamental forces as the universe grows older. Professor Gupta, from the Ottawa University says that "*those things might just be illusions, emergent from the evolving constants defining the strenght of the forces.*"

Consciousness May Not Belong to You

The old story about consciousness being a simple product of neural mass starts to look fragile. Brain mass and mental capacity do not always match. The question starts to arise : *"Is the brain generating consciousness from scratch, or is it more like an antenna tuning into something already there ?"* Some physicists and philosophers are proposing new interpretation suggesting that Consciousness is woven into the fabric of Reality.

New Brain Tool could finally explain Consciousness

A new ultrasound brain tool let scientists directly poke the hidden circuits that give rise to consciousness. They think this tool may be able to probe where in the brain are the neural circuits that generate emotions and even thoughts.

[This is another attempt to validate the materialistic dogma which derives consciousness from matter.]

The Cosmic Web Hidden Highways

Scientists have produced the clearest view ever of part of the cosmic web that connects galaxies together. This cosmic web formed early in the universe cosmogenesis. Scientists think these filaments serve as highways to channel gas into galaxies, fueling the birth of new stars. The faint light emitted by these filaments have been traveling for almost 12 billion years before reaching the Earth.

Another demonstration that everything in our universe is connected, therefore everything is interconnected.

Human Origins Revisited

A new human fossil discovered in Ethiopia revealed that Homo and Australopithecus species lived together some 2.6 to 2.8 million years ago. This finding overturns the "ape-to-human" progression.

"The apes are millions years later than the speaking human being, and they are the latest contemporaries of our Fifth."
